

Job title: Data Analyst

Location: 100% Remote

Type: Full-time-Part time

Omunix International, the franchise of Omunix Argentina, is a talent search company dedicated to connecting talented individuals in Argentina with exciting digital job opportunities in Europe and the United States.

As a Data Analyst, you will be responsible for collecting, analyzing, and interpreting data to provide valuable insights and support decision-making within the organization. Your primary goal will be to turn data into actionable insights that drive business performance and optimize operations. You will work closely with business and technology teams to identify opportunities, develop analyses, and generate reports that contribute to the company's success.

[Brief company description]

Key responsibilities:

- Collect data from various sources, including databases, business systems, flat files, and external sources, ensuring data integrity and quality.
- Clean, transform, and prepare data for analysis, identifying and correcting quality issues, inconsistencies, and outliers.
- Conduct exploratory data analysis to identify trends, patterns, and significant relationships using statistical techniques and data visualization tools.
- Develop predictive models and predictive analytics to forecast outcomes and future behaviors using machine learning and data mining techniques.
- Create and maintain interactive reports and dashboards to visualize and effectively communicate data analysis results.
- Collaborate with business teams to understand their needs and challenges, providing data-driven insights and actionable recommendations.
- Identify opportunities for process and operational improvements through data analysis, proposing solutions and strategies to optimize performance.
- Stay updated on trends and developments in the field of data analytics, continuously evaluating new tools and methodologies to enhance the organization's analytical capabilities.

Requirements:

- University degree in Statistics, Mathematics, Computer Science, Computer Engineering, or a related field.
- Previous experience in data analysis, preferably in business environments.
- Deep knowledge of data analysis techniques, descriptive and inferential statistics, and data visualization tools.
- Experience with data analysis tools such as Python, R, SQL, Excel, Tableau, Power BI, etc.

- Familiarity with machine learning and data mining techniques such as regression, classification, clustering, etc.
- Strong analytical skills and the ability to translate data into actionable insights.
- Excellent verbal and written communication skills, with the ability to present analysis results clearly and effectively.
- Results-oriented and able to work under pressure and meet tight deadlines.

Benefits:

- Competitive salary and performance bonuses.
- Opportunity to work in a dynamic and fast-paced environment.
- Professional development opportunities.
- Flexible work arrangements.
- A supportive and collaborative team culture.
